

Month-end shouldn't mean two weeks of manual matching.

Pureblue builds AI teammates for corporate accounting teams. Expense processing, reconciliation, and close support — handled by role-trained AI inside deterministic workflows with a full audit trail on every entry.

MEET YOUR NEW TEAMMATE

Staff Accountant

Reads receipts and invoices, codes expenses to the right accounts, matches transactions across systems, and flags only the exceptions that need human judgment.

Expense & Receipt Processing

TODAY

Receipts, invoices, and statements arrive in every format imaginable and someone keys them in line by line.

WITH PUREBLUE

Documents are parsed, coded, and posted automatically — Stripe receipts, vendor invoices, card statements — with exceptions routed for review.

Reconciliation Agent

TODAY

Bank, card, and ledger balances are matched by hand in spreadsheets every close.

WITH PUREBLUE

Transactions are matched across sources automatically; unmatched items surface with suggested resolutions instead of blank rows.

Month-End Close Support

TODAY

The close checklist lives in someone's head and the same journal entries get rebuilt every month.

WITH PUREBLUE

Recurring entries, accrual schedules, and close tasks run on rails, with your controller approving instead of assembling.

Built on a production-proven platform

The same workflow platform in production in investment banking and rolling out across HVAC field service

Document-heavy, templated, auditable work is exactly what the platform was built for

Deterministic execution — the AI decides, the workflow guarantees the numbers add up

Fixed-scope implementation

We design, build, and deploy your first AI teammate and its workflows — live in weeks, not quarters.

Platform subscription

Hosting, models, monitoring, and continuous improvement included. Priced against a hire, not a software seat.

Augmentation, not replacement

Your people handle judgment calls; the AI teammate handles the repetitive work between them.
